GEOLOGÍA

001 Ahlbrecht, G.: *Preussenbäume und Bagdadbahn. Deutschland im Blick der französischen Geo-Disziplinen (1821-2004)*

2995 – 572 pp., fig., 21 map. €52,00

002 Arndt, N. / C. M. Leshner / S. Barnes: *Komatiite*

2008 – 488 pp., 166 fig., 29 tabl. €104,00

INDICE: 1. *Background Information - Description of the Field Characteristics, Mineralogy and Geochemistry of Komatiites:* A brief history of komatiite studies and a discussion of komatiite nomenclature — Brief descriptions of six classic komatiite occurrences — Field characteristics, textures and structures — Mineralogy — Geochemistry — Isotopic compositions of komatiites — Experimental petrology — Physical properties of komatiites — 2. *Interpretation - The Manner of Emplacement, the Origin, and the Tectonic Setting of Komatiites:* Physical volcanology — Komatiite-associated Ni-Cu-PGE deposits — The hydrous komatiite hypothesis — Compositions and eruption temperatures of komatiitic liquids — Petrogenesis of komatiite — Geodynamic setting.

003 Assaad, F. A.: *Field Methods for Petroleum Geologists. A Guide to Computerized Correlation Charts Application in North Africa*

2009 – xxii + 112 pp., 109 fig. €85,60

004 Banks, D.: *An Introduction to Thermogeology. Ground Source Heating*

and Cooling

2008 – 352 pp. €103,75

INDICE: An introduction — Geothermal energy — The subsurface as a heat storage reservoir — What is a heat pump? — Heat pumps and thermogeology: a brief history and international perspective — Options and applications for ground source heat pumps — The design of groundwater-based open loop systems — Horizontal closed loop systems — Pond and lake-based ground source heat systems — Subsurface heat conduction and the design of borehole-based closed loop systems — Standing column wells — Thermal response testing — Environmental impact, regulation and subsidy.

005 Bethke, C. M.: *Geochemical and Biogeochemical Reaction Modeling*2007² – 564 pp., 140 fig. €62,50

INDICE: Introduction — Modeling overview — *1. Equilibrium in Natural Water:* The equilibrium state — Solving for the equilibrium state — Changing the basics — Equilibrium models of natural waters — Redox disequilibrium — Activity coefficients — Sorption and ion exchange — Surface complexation — Automatic reaction balancing — Uniqueness — *2. Reaction Processes:* Mass transfer — Polythermal, fixed, and sliding paths — Geochemical buffers — Kinetics of dissolution and precipitation — Redox kinetics — Microbial kinetics — Stable isotopes — Transport in flowing groundwater — Reactive transport — *3. Applied Reaction Modeling:* Hydrothermal fluids — Geothermometry — Evaporation — Sediment diagenesis — Kinetics of water-rock interaction — Weathering — Oxidation and reduction — Waste injection wells — Petroleum reservoirs — Acid drainage — Contamination and remediation — Microbial communities.

Reymont: On correlational properties for volcanic earthquakes associated with Asamayama (Japan), 1983–2005 — J. E. Robinson: Crosscorrelation of Sea Levels — I. Lerche: Diversion of flooding rivers to residual mining open pits — I. Lerche: A christmas parking lot problem.

007 Boudagher-Fadel, M. K.: *Evolution and Geological Significance of Larger Benthic Foraminifera*

2008 – 544 pp., fig. €145,60

008 Bridge, J. / R. Demicco: *Earth Surface Processes, Landforms and Sediment*

Deposits

2008 – 830 pp., 717 fig., 8 lám. col. €62,50

INDICE: 1. *Introduction:* Definitions, rationale and scope of the book — Overview of the Earth — 2. *Production of Sediment at the Earth's Surface:* Weathering of rocks, production of terrigenous sediment, and soils — Biogenic and chemogenic sediment production — 3. *Fundamentals of Fluid Flow, Sediment Transport, Erosion and Deposition:* Unidirectional turbulent water flow, sediment transport, erosion and deposition — Air flow, sediment transport, erosion and deposition — Multidirectional water flow, sediment transport, erosion and deposition — Movement of sediment by gravity — Generation and movement of volcanoclastic sediment — Ice flow, sediment transport, erosion and deposition — Biogenic and chemogenic depositional structures — Post-depositional deformation of soft sediment — 4. *Environments of Erosion and Deposition:* Rivers, alluvial plains and fans — Lakes — Coasts and shallow seas — Arid environments — Glacial and periglacial environments — Deep seas and oceans — 5. *Sediment into Rock: Diagenesis:* Diagenesis — 6. *Long-Term, Large-Scale Processes: Mountains and Sedimentary Basins:* Tectonic, climatic and eustatic controls on long-term, large-scale erosion and deposition.

009 Camacho, A. G. / J. I. Díaz / J. Fernández, eds.: *Earth Sciences and Mathematics*, 1

2008 – vi + 234 pp. €53,40

INDICE: Introduction: Linking earth sciences and mathematics — A review of earthquakes statistics: fault and seismicity based models, ETAS and BASS — A finite element algorithm of a nonlinear diffusive climate energy balance model — An upper limit to ground deformation in the island of Tenerife, Canary Islands, for the period 1997-2006 — Multi-channel satellite image analysis using a variational approach — 3-D gravity inversion by growing bodies and shaping layers at Mt. Vesuvius — Testing logselfsimilarity of soil particle size distribution: simulation from minimum inputs — Steric sea level change and its impact on the gravity field caused by global climate change.

Fernando & al.: Tsunamis: Manifestation and aftermath — J. J. Riley: Intermediate-scale dynamics of the upper troposphere and stratosphere — G. A. Grell: Coupled weather-chemistry modeling — R. Saravanan: Seasonal-to-decadal prediction using climate models: successes and challenges — A. S. Zakey & al.: Climate change and related disasters — R. Rasmussen & al.: Impact of climate change on precipitation — T. T. Warner: Weather-related disasters in arid lands — J. Pudykiewicz / G. Brunet: The first hundred years of numerical weather prediction — J. Dudhia: Fundamental issues in numerical weather prediction — A. Mahmood / M. Shokr: Space measurements for disaster response: the International Charter — W. L. Smith: Weather satellite measurements: their use for prediction — M. Gad-el-Hak: Epilogue.

019 Dewalle, D. R. / A. Rango: *Principles of Snow Hydrology*

2008 – 420 pp., 113 fig., 81 fot. €104,25

INDICE: Introduction — Snow climatology and snow distribution — Snowpack condition — Ground-based snowfall and snowpack measurements — Remote sensing of the snowpack — Snowpack energy exchange: basic theory — Snowpack energy exchange: topographic and forest effects — Snowfall, snowpack and meltwater chemistry — Snowmelt runoff processes — Modelling snowmelt runoff — Snowmelt Runoff Model (SRM) — Snowpack management and modifications.

020 Donner, R. / S. M. Barbosa, eds.: *Nonlinear Time Series Analysis in the Geosciences. Applications in Climatology, Geodynamics and Solar-Terrestrial Physics*

2008 – xiv + 390 pp., 170 fig. €139,00

INDICE: 1. *Applications in Climatology and Atmospheric Sciences:* A. Gluhovsky: Subsampling methodology for the analysis of nonlinear atmospheric time series — J. Miksovsky & al.: Global patterns of nonlinearity in real and gcm-simulated atmospheric data — S. Hallerberg & al.: Prediction of extreme events — D. B. Percival: Analysis of geophysical time series using discrete wavelet transforms: an overview — G. S. Duane / J. P. Hacker: Automatic parameter estimation in a mesoscale model without ensembles — W. W. Hsieh / A. J. Cannon: Towards robust nonlinear multivariate analysis by neural network methods — R. Donner & al.: Complexity of spatio-temporal correlations in Japanese air temperature records — 2. *Applications in Oceanography and Seismology:* S. M. Barbosa & al.: Time series analysis of sea-level records: characterising long-term variability — A. A. Ardalan / H. Hashemi: Empirical global ocean tide and mean sea level modeling using satellite altimetry data case study: a new empirical global ocean tide and mean sea level model based on Jason-1 satellite altimetry observations — J. A. Hawkins & al.: Fourier, scattering, and wavelet transforms: applications to internal gravity waves with comparisons to linear tidal data — M. E. Ramírez & al.: Crustal deformation models and time-frequency analysis of GPS data from Deception island volcano (South Shetland Islands, Antarctica) — A. Jiménez & al.: Describing seismic pattern dynamics by means of ising cellular automata — 3. *Applications in Solar-Terrestrial Physics:* I. M. Moroz: Template analysis of the Hide, Skeldon, Acheson dynamo — N. G. Mazur: Methods to detect solitons in geophysical signals: the case of the derivative nonlinear Schrödinger equation — M. Palus / D. Novotna: Detecting oscillations hidden in noise: common cycles in atmospheric, geomagnetic and solar data — R. Donner: Phase coherence analysis of decadal-scale sunspot activity on both solar hemispheres.

021 Downing, R. A. / M. Price / G. P. Jones, eds.: *Hydrogeology of the Chalk of North-West Europe*

2005 – 310 pp., 175 fig. €123,10

INDICE: R.A. Downing & al.: The making of an aquifer — J. M. Hancock: The formation and diagenesis of chalk — M. Price & al.: The chalk as an aquifer — J. A. Barker: Modelling groundwater flow and transport in the chalk — S. S. D. Foster: The chalk aquifer—its vulnerability to pollution — N. Crampon & al.: France — A. Dassargues / A. Monjoie: Belgium — P. van Rooijen: The Netherlands — E. Nygaard: Denmark — O. Gustafsson: Sweden — J. W. Lloyd: United Kingdom — M. D'Heur: The chalk as a hydrocarbon reservoir — R. A. Downing & al.: An aquifer at risk.

022 Emerson, S. R. / J. I. Hedges: *Chemical Oceanography and the Marine Carbon Cycle*

2008 – 468 pp., 196 fig., 8 lám. col. €62,50

INDICE: 1. *Introduction to Chemical Oceanography:* Oceanography background — Geochemical mass balance — Thermodynamics background — Carbonate chemistry — Stable and radioactive isotopes — Life processes in the ocean — Paleooceanography and paleoclimatology — 2. *Advanced Topics in Marine Geochemistry:* Marine organic geochemistry — Molecular diffusion and reaction rates — Gases and air – water exchange — The global carbon cycle — Chemical reactions in marine sediments.

023 Fluegel, E.: *Microfacies of Carbonate Rocks. Analysis, Interpretation and Application*

2008 – 996 pp., 340 fig., 1 CD-ROM €112,30

INDICE: New perspectives in microfacies — Carbonate depositional environments — Microfacies analysis — Methods — Microfacies data: matrix and grains — Microfacies data: fabrics — Quantitative microfacies analysis — Diagenesis, porosity, and dolomitization — Classification - a name for your sample — Limestones are biological sediments — Fossils in thin section: it is not that difficult — Microfacies interpretation — Summarizing microfacies criteria: microfacies types — Recognizing paleoenvironmental conditions — Integrated facies analysis — Depositional models, facies zones and standard microfacies — Basin analysis: recognizing depositional settings — Realizing depositional constraints and processes — Practical use of microfacies — Reservoir rocks and host rocks — Carbonate rock resources, facies, weathering, preservation — Microfacies and archaeology.

024 Foody, G.: *Uncertainty in Remote Sensing and Gis*

2002 – 326 pp. €131,40

025 Ganguly, J.: *Thermodynamics in Earth and Planetary Sciences*

2008 – xxv + 501 pp., 210 fig. €85,60

INDICE: Introduction — First and second laws of thermodynamics — Thermodynamic potentials and derivative properties — Third law and thermochemistry — Critical phenomenon and equations of state — Phase transitions, melting and reactions of stoichiometric phases — Thermal pressure, earth's interior and adiabatic processes — Thermodynamics of solutions — Thermodynamic solution models: non-electrolytes — Phase equilibria involving solutions and gaseous mixtures — Element fractionation in geological systems — Electrolyte solutions and electrochemistry — Surface effects — *Appendices:* Rate of entropy production and kinetic implications — Review of some mathematical concepts of classical thermodynamics — Estimation of thermodynamic properties of solids.

026 Geeson, N. A. / C. J. Brandt / J. B. Thornes, eds.: *Mediterranean Desertification: A Mosaic of Processes and Responses*

2002 – 456 pp., fig. €242,50

027 Hambrey, M. J. / J. Alean: *Glaciers*2004² – xviii + 376 pp., 220 lám. €55,50

INDICE: Earth, the icy planet — The glacier family — Birth, growth and decay of glaciers — Fluctuating glaciers — Ice on the move — Nature's conveyor belt — Ice and water — Antarctica: the icy continent — Glaciers and volcanoes — Shaping the landscape — Glaciers and wildlife — Benefits of glaciers — Glacier hazards — Living and travelling on glaciers — Earth's glacial record — *Postscript:* Future prospects of glaciers.

028 Hauck, C. / C. Kneisel, eds.: *Applied Geophysics in Periglacial Environments*

2008 – 256 pp., 18 fig., 13 tabl. €97,00

INDICE: 1. Introduction — 2. Introductory Chapters for the Main Geophysical Methods Applied: C. Kneisel / C. Hauck: Electric methods — A. Hördt / C. Hauck: Electromagnetic methods — L. Schrott / T. Hoffmann: Refraction seismics — I. Berthling / K. Melvold: Ground-penetrating radar — 3. Case Studies: R. Delaloye / C. Lambiel: Typology of vertical electrical soundings for permafrost/ground ice investigation in the forefields of small alpine glaciers — M. Ishikawa: ERT imaging for frozen ground detection — K. Harada: Electrical resistivity values of frozen soil from VES and TEM field observations and laboratory experiments — W. Dobinski & al.: Results of geophysical surveys on Kasprowy Wierch, the Tatra mountains — A. Ikeda: Reassessment of DC resistivity in rock glaciers by comparing with P-wave velocity: a case study in the Swiss Alps — C. Hauck / C. Kneisel: Quantifying the ice content in low-altitude scree slopes using geophysical methods — O. Sass: The use of GPR in determining talus thickness and talus structure — I. Berthling & al.: GPR soundings of rock glaciers on svalbard — T. Irvine-Fynn / B. Moorman: Arctic glaciers and ground-penetrating radar case-study: Stagnation Glacier, Bylot Island, Canada — K. Melvold / T. Schuler: Mapping of subglacial topography using GPR for determining subglacial hydraulic conditions — S. K. Melvold: Snow measurements using GPR: example from Amundsenisen — I. Berthling & al.: Mapping Frazil ice conditions in rivers using ground penetrating radar — 4. Tables of Typical Values of Geophysical Parameters for Periglacial Environments.
